

Waterwise Display

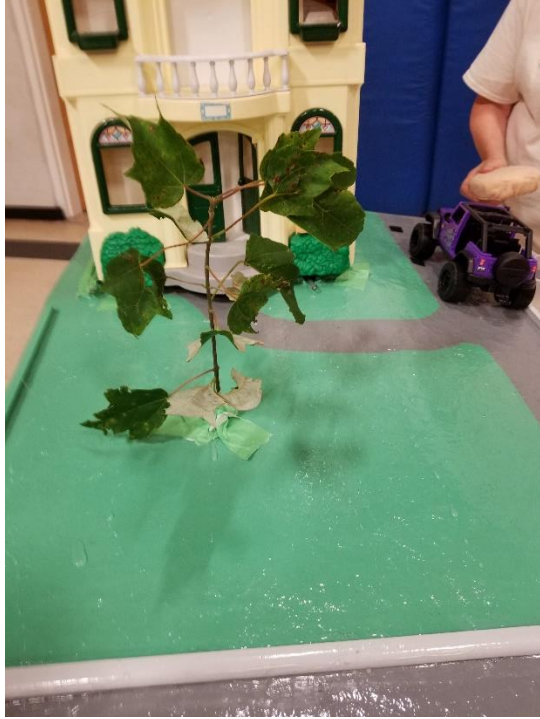

Display demonstrates how conservation landscaping can prevent water run off which may move contaminants like fertilizer to the bay.

Look for base, posters and two blue buckets which hold the various parts to the display.

What it looks like after setup. Blue bucket catches “rain water”.

Compare water run off without and with conservation landscaping elements.

For additional information contact Diane Dean at ddean.mg@gmail.com .

In addition there are various poster displays about water conservation. See “Display Boards” document.
